

BREATHE EASIER...

...with a lung screening from Radiology Associates of Hartford!

Are you at risk for lung cancer? Now you can breathe easier when you schedule low-dose CT lung screening from RAH. Radiology Associates of Hartford is pleased to announce we are accredited by the American College of Radiology as a Low Dose Lung CT Screening Center. This designation, along with reporting radiation dose information, allows RAH to offer this exam as covered by most insurance plans.

Superior to chest X-ray

Studies have shown that current and former smokers, ages 50-79 years old, evaluated with CT have a much greater survival rate than those evaluated with other methods. What's more, CT can find smaller, earlier stage and more treatable cancers than X-ray.

If you're at risk for lung cancer, put your mind at ease with this fast, easy and completely non-invasive test from RAH!
