

VETERANS, ACTIVE DUTY MILITARY, FIRST RESPONDERS and TEACHERS

*You've served
us well..
Allow us to
return the favor.*

2nd Annual Event

WHERE:

Radiology Associates of
Hartford, Enfield

9 Cranbrook Blvd. Ste. 102

WHEN:

Veteran's Day
Saturday, November 10th
8am - 2pm

RSVP:

Space is limited so please
call (860) 969-6400 today!

*Free blood pressure
screenings will also
be available.*

**Heart disease is
the leading killer of
Americans, and veterans
with combat experience
and firefighters are
especially at risk for heart
disease and heart attack.***

Central Connecticut Cardiologists have teamed up with Radiology Associates of Hartford to offer you a **FREE Heart Scan on Veteran's Day.**

If you are a current or former member of the U.S. military, a first-responder or teacher we would like to thank you for your service with a free heart scan of your coronary arteries.

The Coronary Calcium Score (heart scan) is the only non- invasive test that can accurately detect—or rule out—the presence of heart disease in otherwise healthy individuals.

This fast and easy test is performed with a computed tomography (CT) scanner and special software to determine if the coronary arteries are blocked or narrowed by the buildup of plaque—an indicator for atherosclerosis or coronary artery disease. You simply hold your breath while the scanner passes over you. You won't even need to remove your shirt.

The heart scan's superiority to other risk assessment methods, like cholesterol and blood pressure, has been demonstrated in numerous clinical studies encompassing more than 20,000 patient years of observation. Additionally, the Society for Heart Attack Prevention and Education (SHAPE) and others recommend this test because:

- It has been shown to be five (5) times more accurate than other risk assessment methods at predicting which patients are at risk for coronary artery disease
- Information gained from the calcium score can more accurately identify patients requiring cholesterol-lowering therapy, helping to reduce instances of unnecessary, costly medication
- The test can also be used, over time, to effectively measure response to targeted therapy

Space is limited, so please call (860) 969-6400 to schedule your complimentary heart scan.
