

THE MOST IMPRESSIVE NEW DONUTS IN BLOOMFIELD

RAH has always believed in using the most advanced imaging equipment, and our new Bloomfield location is no exception. We've installed brand-new MRI and CT systems at this location to ensure the highest quality images, ability to accommodate more patients and a faster and more comfortable patient experience.

MAGNETOM Vida MRI – High Performance 3T MRI

This powerful magnet enables fast and easy patient positioning, shorter examination times, exceptional quality images and more—in a patient-friendly 70 cm wide-bore opening. This system is ideal for emerging new MRI applications such as cardiac MRI, advanced neurologic, oncologic imaging and orthopedic imaging, as well as breast, elastography and prostate MRI.

SOMATOM go.Up – A Superior Patient CT Experience

This patient-friendly CT system allows the operator to be in close proximity to the patient during the examination. It enables faster patient preparation and is clinically shown to increase the positive patient experience.

In some ways, these new systems are helping to significantly improve the care patients receive by providing more detailed anatomical information to physicians. In other ways, they dramatically improve the patient experience and overall comfort. In all ways, they reflect the commitment to excellence you've come to expect from RAH.
